

## **IN THE ABSTRACT**

Please amend the Abstract as follows:

-- ~~In order to provide a~~A data distribution system that is capable of distributing, to a mobile communication terminal at a specific location, information suited for the location, ~~and e.g., guide information, and that is capable of allowing anyone to easily and freely access the information, there is provided a data distribution system communicating with a mobile data communication device that is capable of obtaining. The data distribution system obtains~~ current position information indicating a current position. The system ~~includes a~~ is equipped with data communication ~~means-unit~~ for sending and receiving data to and from the mobile data communication device and ~~means for a storing unit for information~~ storing area position information indicating a position of a specific area and information associated with the specific area. ~~Control is provided so that, if~~ the mobile data communication device is located in the specific area, information associated with the specific area is sent to the mobile data communication device via the data communication ~~means~~unit. --
